mr Bean's AMAZING A to Z

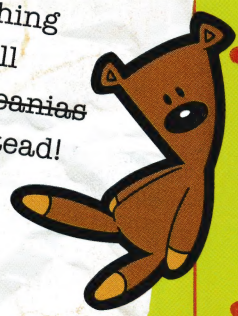
Mr Bean
c/o Mrs Wicket
'Daffodils'
12 Arbor Road
London N10

Dear Reader

Do you know what the ~~wurst~~ WORST thing in the world is? Being called "that stupid idiot who lives upstairs". That's exactly what Mrs Wicket said to me today and yesterday and... in fact, she says it EVERY DAY!!! But not any more. With this Amazing A to Z, I can find out everything about anything. Soon she'll have to call me "that clever ~~jeanias~~ ~~genie~~ ~~gnu~~ man who lives upstairs" instead!

Signed Mr Bean



HOW TO ORDER!

FROM YOUR NEWSAGENT
Your local newsagent will be happy to take your regular weekly order.

BY SUBSCRIPTION
Have Mr Bean's Amazing A to Z delivered straight to your door. See the enclosed leaflet for our special offers, or call 0870 740 6623.

BACK ISSUES
Complete your collection by ordering any missing issues. Each issue costs £1.85. Postage is free.
Write to: Mr Bean's Amazing A to Z, Database Factory Ltd, Hexagon House, 86 Parsonage Barn Lane, Ringwood, Hampshire, BH24 1ZZ. Make cheques payable to Mr Bean's Amazing A to Z.

Aardvark

SAY WHAT? SAY ARD-VARK

Aardvarks really dig digging! They live underground in burrows during the day, and at night they hunt for food. Aardvarks can escape from a leopard or lion by digging themselves a hidey-hole with their strong claws. Their claws are also perfect for ripping into tasty ant nests. An aardvark can wolf down 50,000 insects in just one night!

FAST FACTS!

TYPE OF CREATURE: Mammal
FOUND: Africa
LIVES: Grassland; open woodland; forests
AGE: Up to 20 years
SIZE: Up to 2m long
EATS: Termites; ants
NEED TO KNOW: Aardvark eyesight is so weak, they sometimes bump into trees when they run!

Aborigines

SAY WHAT? SAY AB-OR-RIJ-IN-EES

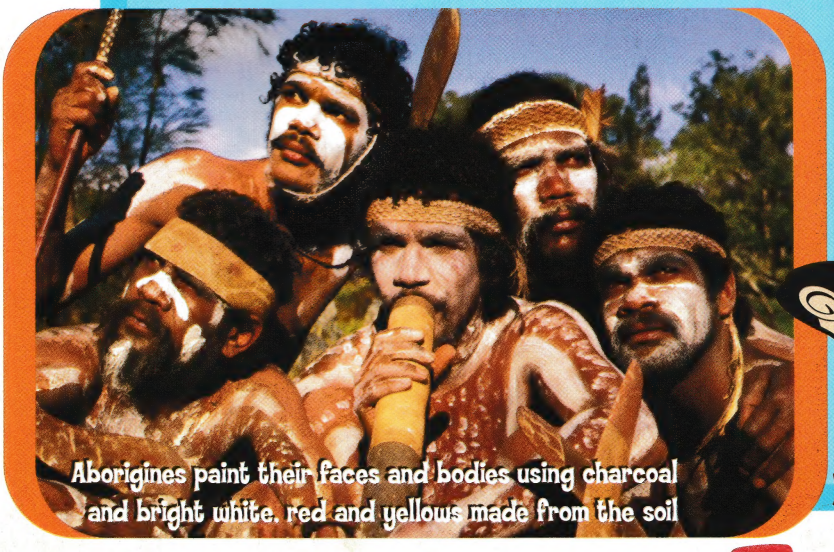
Long before anyone else knew Australia existed, Aborigines moved 'down under' from Asia, back in 40,000 BC. Today, there are 444,000 Aborigines - 2% of Oz's population.

FOOD FOR THOUGHT

Some Aborigine men still go walkabout, which means they roam alone around the bush, a wild part of Oz. They are expert hunters and survive on whatever 'bush tucker', or food, they catch... emus, kangaroos, fish and even insects! Fancy some grubs for your grub?

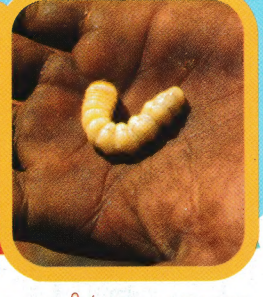
Catch a Kylie

Kylie Minogue isn't an Aborigine - but her name is! Kylie is Aboriginal for a straight hunting boomerang. Curved boomers that whizz back are for fun.



Aborigines paint their faces and bodies using charcoal and bright white, red and yellows made from the soil

BEAN'S BRAINBUSTER
What kind of insects do Aborigines eat: witchetty grubs, wizardy flies or warlock beetles?



ANSWER Witchetty grubs - barbecued, they taste like scrambled egg!

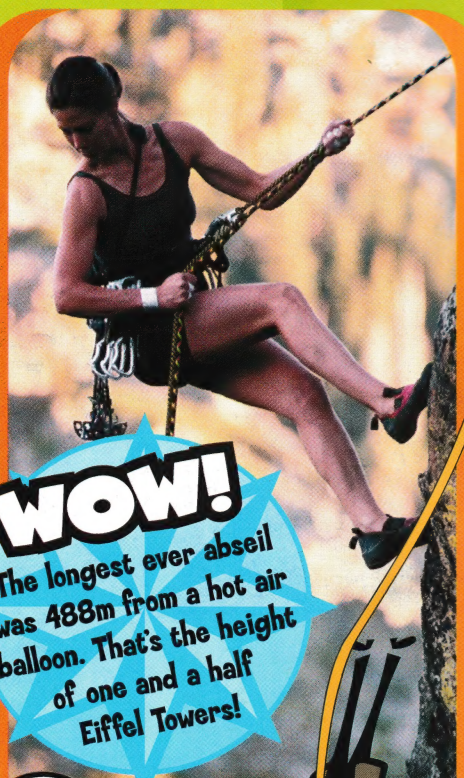
Abseiling

SAY WHAT? SAY AB-SAIL-ING

Ever wanted to zoom down a long rope, very fast? After a slow climb up a mountain, it's the quickest way down! Abseilers lean back holding a rope and walk their feet down the rock face. Thrill-seekers abseil from cliffs, off skyscrapers, into canyons... even face first!

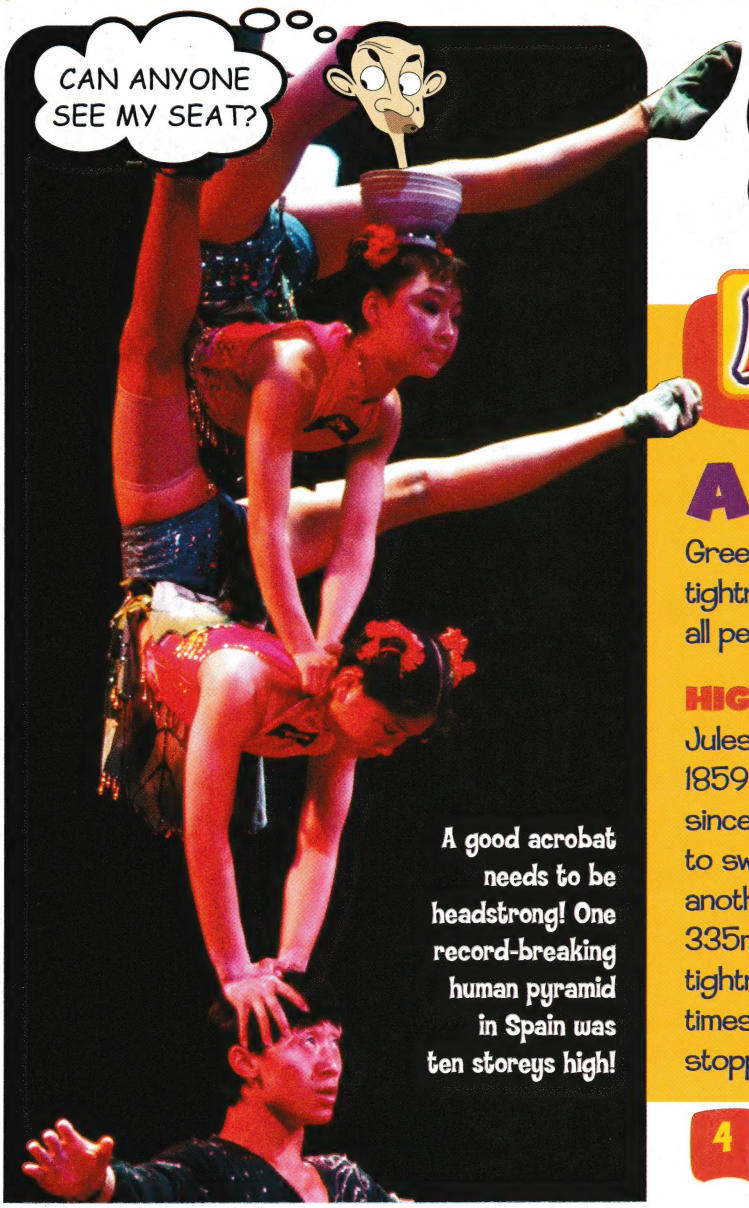
ABSEIL ACTION!

Knowing a few rope tricks can be very useful! Soldiers can abseil into hard-to-reach locations such as jungles or high buildings by sliding down from a helicopter. Cleaners abseil down Big Ben in London to scrub the clock faces squeaky clean. Abseiling is also used to rescue unlucky animals that have fallen off cliff edges onto rocky ledges. Rescuers abseil down and pull the animal to safety with a harness!



WOW!

The longest ever abseil was 488m from a hot air balloon. That's the height of one and a half Eiffel Towers!



A good acrobat needs to be headstrong! One record-breaking human pyramid in Spain was ten storeys high!

Acrobat

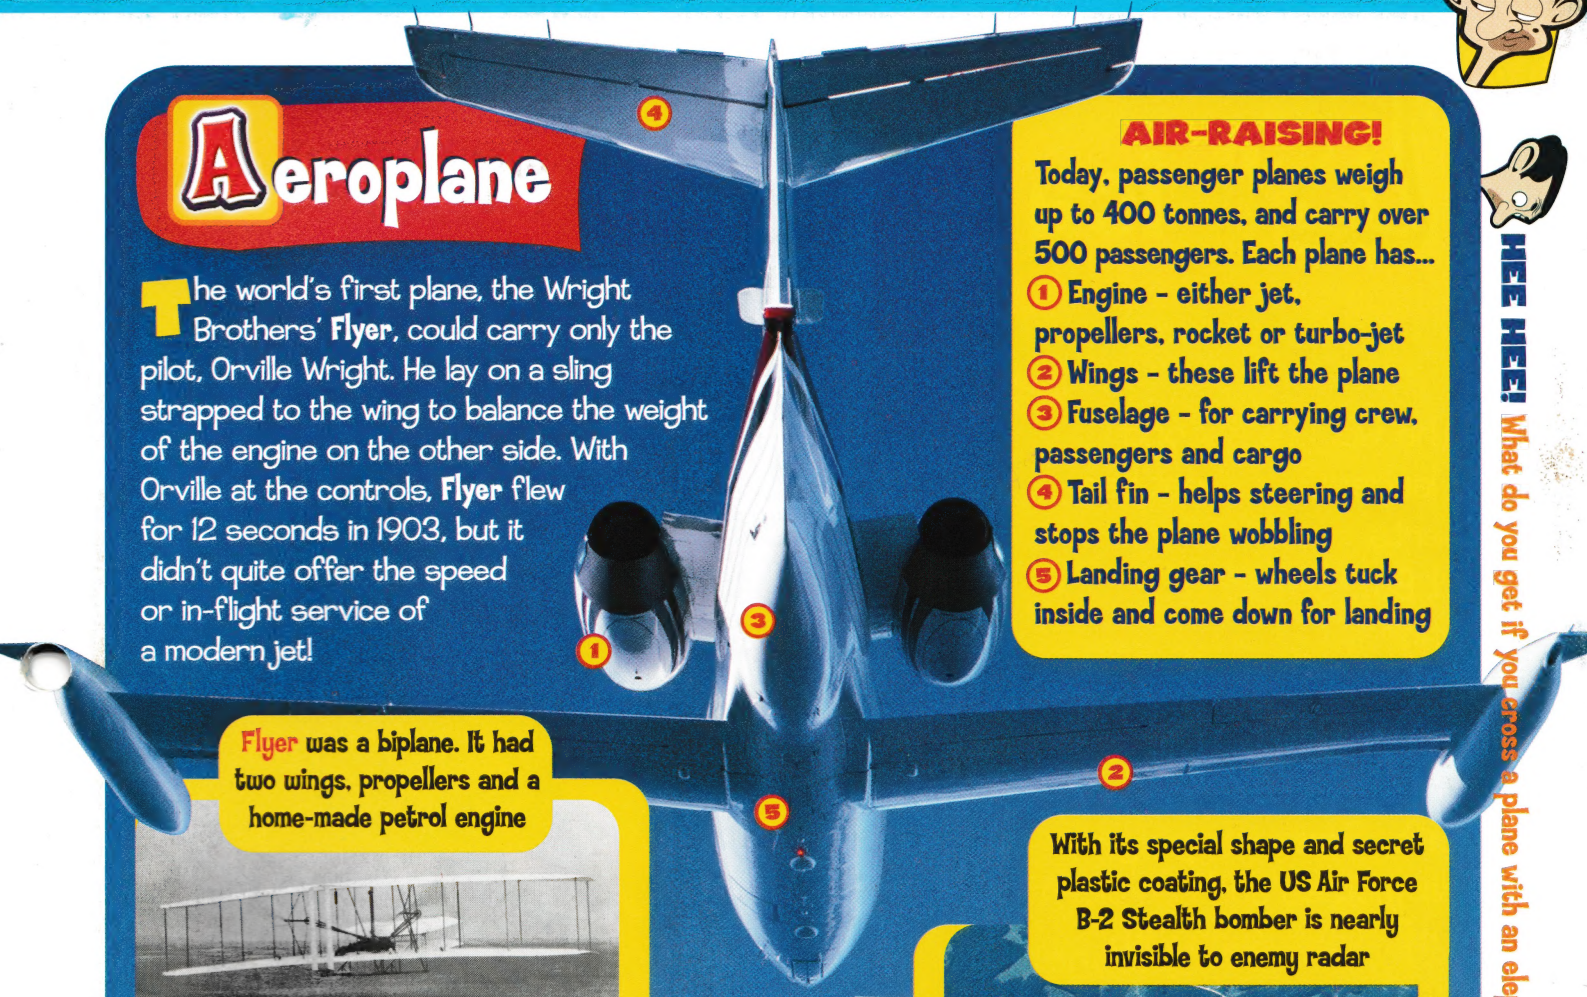
Acrobats need nerves of steel - and very bendy bodies! The word comes from Ancient Greek meaning 'to walk on tiptoes'. Trapeze artists, tightrope walkers, balancing acts and tumblers have all performed at circuses for hundreds of years.

HIGH FLYERS

Jules Léotard was a famous French acrobat. In 1859 he created the first flying trapeze - but since no one had invented the safety net, Jules had to swing over a pile of mattresses! The same year, another French acrobat, Charles Blondin, walked 335m across America's Niagara Falls on a tightrope. He repeated this amazing feat many times, on stilts and in a sack - once, he even stopped to cook himself an omelette!

Aeroplane

The world's first plane, the Wright Brothers' **Flyer**, could carry only the pilot, Orville Wright. He lay on a sling strapped to the wing to balance the weight of the engine on the other side. With Orville at the controls, **Flyer** flew for 12 seconds in 1903, but it didn't quite offer the speed or in-flight service of a modern jet!



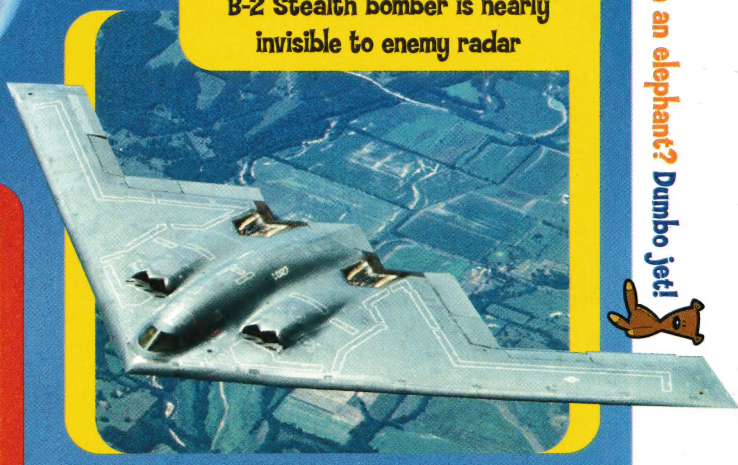
AIR-RAISING!

Today, passenger planes weigh up to 400 tonnes, and carry over 500 passengers. Each plane has...

1. Engine – either jet, propellers, rocket or turbo-jet
2. Wings – these lift the plane
3. Fuselage – for carrying crew, passengers and cargo
4. Tail fin – helps steering and stops the plane wobbling
5. Landing gear – wheels tuck inside and come down for landing

Flyer was a biplane. It had two wings, propellers and a home-made petrol engine

With its special shape and secret plastic coating, the US Air Force B-2 Stealth bomber is nearly invisible to enemy radar



RECORD BREAKERS!

THE WORLD'S...

FASTEST PASSENGER PLANE: Concorde, which flew its last flight in 2003, was the only supersonic passenger plane. It cruised at 1,350mph (2,172km/h) – that's twice the speed of sound!

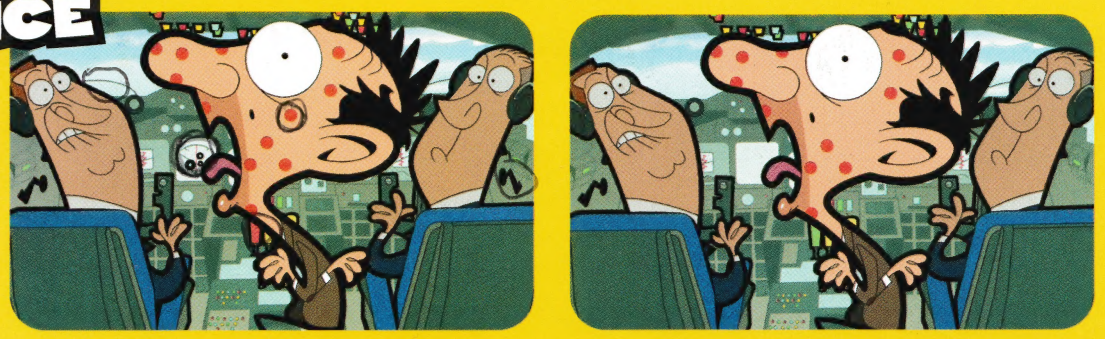
FASTEST COMBAT JET: The Soviet Mig-25 fighter clocks an impressive 2,110mph (3,395km/h)

Make your own fliers at www.paperairplanes.co.uk

HEE HEE! What do you get if you cross a plane with an elephant? Dumbo jet!

SPOT THE DIFFERENCE

Last time Mr Bean got in a plane it was more of a fright than a flight! How quickly can you spot the five differences between these two pictures?



Answers on page 23

Africa

The world's second largest continent has deserts, diamonds and gold. But the real gems are the animals – 60 fierce meat-eating mammals, 45 types of monkey and the world's tallest mammal, the giraffe. These chaps grow to six metres and can clean out their own ears with their 45cm-long tongues!

FAST FACTS!

SIZE: 30,244,050sq km
COUNTRIES: Over 50
POPULATION: 840 million
LANGUAGES: Over 1,000 – there may be more than 2,000!
WEATHER: Hot and rainy at the Equator; hot and dry in the deserts
NEED TO KNOW: The first human beings evolved in Africa!

RECORD BREAKERS!

AFRICA CONTAINS THE WORLD'S...
BIGGEST LAND ANIMAL: The African elephant can grow 3.7m tall and weigh up to six tonnes
LONGEST RIVER: The River Nile, 6,671km from Burundi to Egypt
FASTEST ANIMAL: Cheetahs reach speeds of up to 65mph (105km/h) over short distances
TALLEST PEOPLE: The Watusis tribe in Burundi. Many men are over 2.1m tall!
BIGGEST FROG: The Goliath frog in Cameroon is over 30cm long, and heavier than 3kg!
BIGGEST DESERT: The Sahara, in North Africa is 9,100,000sq km
HOTTEST TEMPERATURE: 58°C in Libya, recorded in 1922

HO HO! What's worse than a giraffe with a sore throat? A centipede with athlete's foot!

Mr Bean's STINKY STICKER ATLAS
PAGE 28

Aikido

SAY WHAT? SAY EYE-KEY-DOH

Ancient and awesome - that's aikido! This Japanese martial art is more than 200 years old and still going strong. Fighters are called aikidoka. They don't punch their opponents, but use dodges, throws and a sword called a bokken. The aikidoka on the right is wearing special, baggy trousers called hakama. They may look like a big skirt, but don't laugh... hakama are only worn by the best, black belt aikidoka.

WOW!

Hong Kong street cleaners are trained in aikido to defend themselves against angry litterbugs!

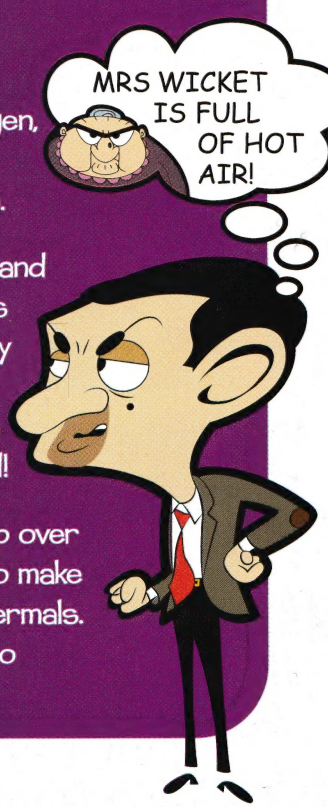
WOW!

Thunder is the sound air makes when it expands after being heated by a flash of lightning!

Air

We can't see it but it's all around us and we need it to live. What exactly is air - and what does it do?

- Air is a mix of gases - mainly nitrogen and oxygen, but also carbon dioxide and helium.
- Air expands and rises when it's heated. That's why hot air balloons can climb 5,000m above the ground!
- Air warms up over hot ground to make columns called thermals. Birds use these to soar higher.



Bean Scenes

Trouble always follows Mr Bean! From medical mishaps to sending Teddy up in flames... you don't need eagle eyes to spot the chaos he causes. But you will need them if you want to find the answers to these pesky posers!

1
How many times can you see Teddy in the 56 pictures?
24
2
Animals pop up in 18 pictures – true or false? Look very closely!
False
3
Mr Bean loves food! How many pictures show him with some grub?
11
4
Two of the images are the same – can you spot them?

Find the answers on page 23

Aladdin

Aladdin is over 1,000 years old! The poor tailor's son originally appeared in **Arabian Nights**, a book of magical adventures, which also includes the tales of Sinbad and Ali Baba. In the story, a wicked magician tricks Aladdin into entering a cave to steal a magic lamp. When Aladdin keeps the treasure, the magician traps him in the cave. But the Genie sets our hero free and grants all his wishes. Lucky Aladdin becomes rich, marries a princess, defeats the evil magician and lives happily ever after. Result!

WOW!

The Genie in Disney's Aladdin movies was voiced by Robin Williams and Dan Castellaneta, the voice of Homer Simpson

Albino

WOW!

In Olney, Illinois, USA, special police officers protect the albino squirrels!

An animal or human without pigment, or colour, in its skin, hair or feathers is called albino. An albino person's skin and hair are pale because they have no melanin, which makes skin brown and protects it from harmful sunrays. Many albinos' eyes are pink. Their irises have no colour so the blood vessels show through.

Albino animals include koala bears (left) and rats (below)

Alexander the Great

356 BC - 323 BC

Alexander became king when he was only 19 years old. And he wanted to rule the world! Alex built up the biggest ancient western empire – it stretched from Egypt in the west to India in the east. This enormous area was about the same size as Australia!

FIGHTING TALK

Alexander was nicknamed 'the Great' by the Romans, because of his bravery. He always led his armies of up to 400,000 soldiers into battle. But you had to beware the fearless fighter. When Alex's foster brother Clitus insulted him, Alex killed him. Ouch!

SAME NAMES

Alexander founded over 70 cities... and called many of them Alexandria after himself. Big, brave Alex wasn't killed in combat – the young king died after becoming ill at a banquet!

BEAN'S BRAINBUSTER

Which king in a pack of playing cards represents Alexander?

Find the answer below!

Algae

SAY WHAT? SAY AL-JEE OR AL-GEE

Algae can be as tiny as a single cell or they can grow to 60m tall! They're a bit like plants without roots, stems or leaves, and they live on moist land or in water. Algae might look slimy and yukky but they're very useful:

- You can eat them! Seaweed is a kind of algae.
- Dried algae makes a great fertiliser for gardens.
- Algae is added to paint to keep it in top condition.

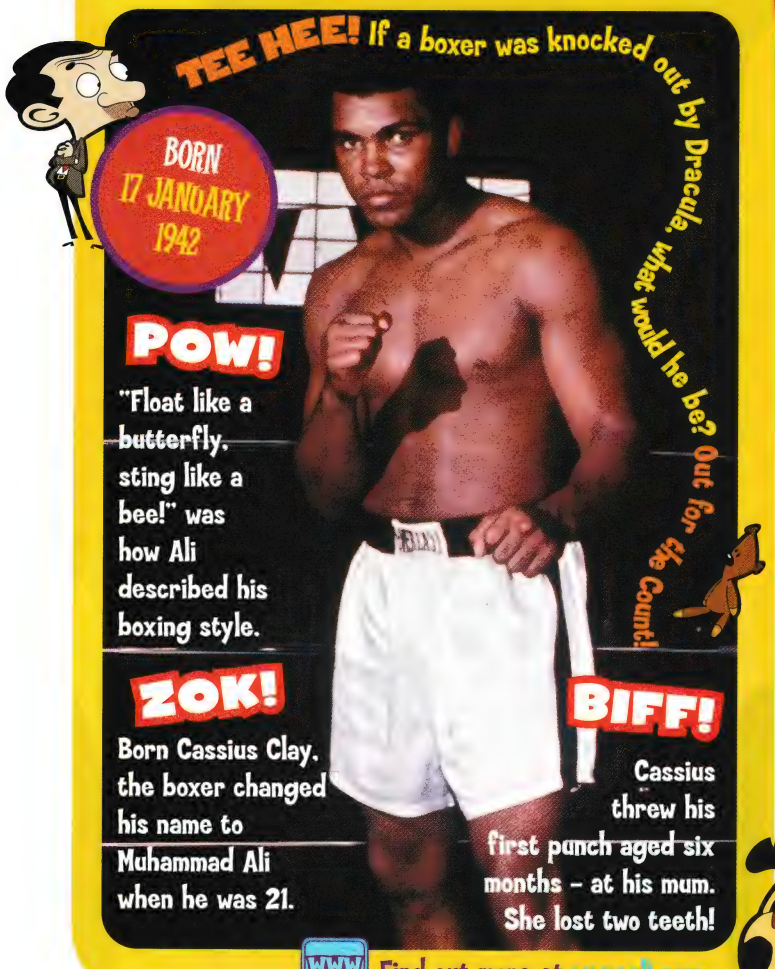
WOW!

Some flamingos are pink because they eat algae – the algae turn pink when they are digested!

ANSWER It's the king of clubs

Muhammad Ali

Ali started boxing when he was 12, after his new bike was pinched. He reported the theft to a policeman, who invited the angry boy to a boxing gym. That's where Ali learned to fight. He became heavyweight champion of the world aged just 22 - and won the title a record three times!



TEE HEE! If a boxer was knocked out by Dracula, what would he be? Out for the Count!
BORN 17 JANUARY 1942
POW!
"Float like a butterfly, sting like a bee!" was how Ali described his boxing style.
ZOK!
Born Cassius Clay, the boxer changed his name to Muhammad Ali when he was 21.
BIFF!
Cassius threw his first punch aged six months - at his mum. She lost two teeth!

WWW Find out more at www.ali.com

Alice in Wonderland

In 1862, ten-year-old Alice Liddell went on a picnic with her sisters and a brainy maths tutor called Charles Dodgson. To amuse everyone, he made up stories about Alice. Using the name Lewis Carroll, he turned these tales into the books **Alice's Adventures in Wonderland** and **Through the Looking Glass and What Alice Found There**. Both reads are full of crazy characters, such as the White Rabbit, the Mad Hatter and the evil Queen of Hearts.

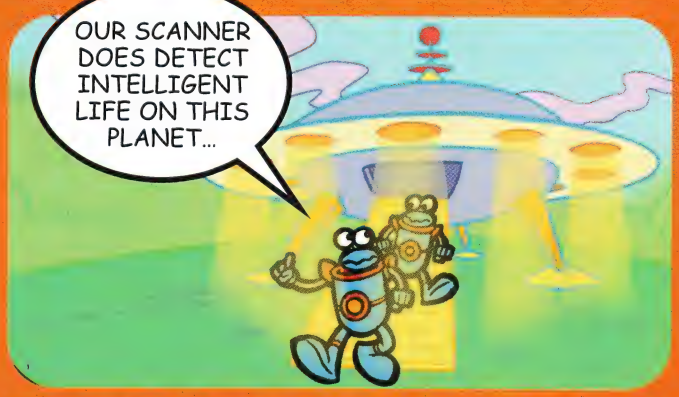
Alice Liddell - the real Alice in Wonderland

BEAN'S BRAINBUSTER

The Cheshire Cat, the Siamese Cat or Scrapper - which did Alice meet?

Find the answer below!

Mr Bean IN WORLDS APART



ANSWER The Cheshire Cat

Aliens

Aliens, Martians, extra-terrestrials, call them what you like, visitors from outer space keep a low profile - if they exist at all! In July 1947, the people of Roswell, USA, say a flying saucer of inter-galactic travellers crash-landed near the town. They even claim to have a film of an alien being interviewed!

THAT'S LIFE...

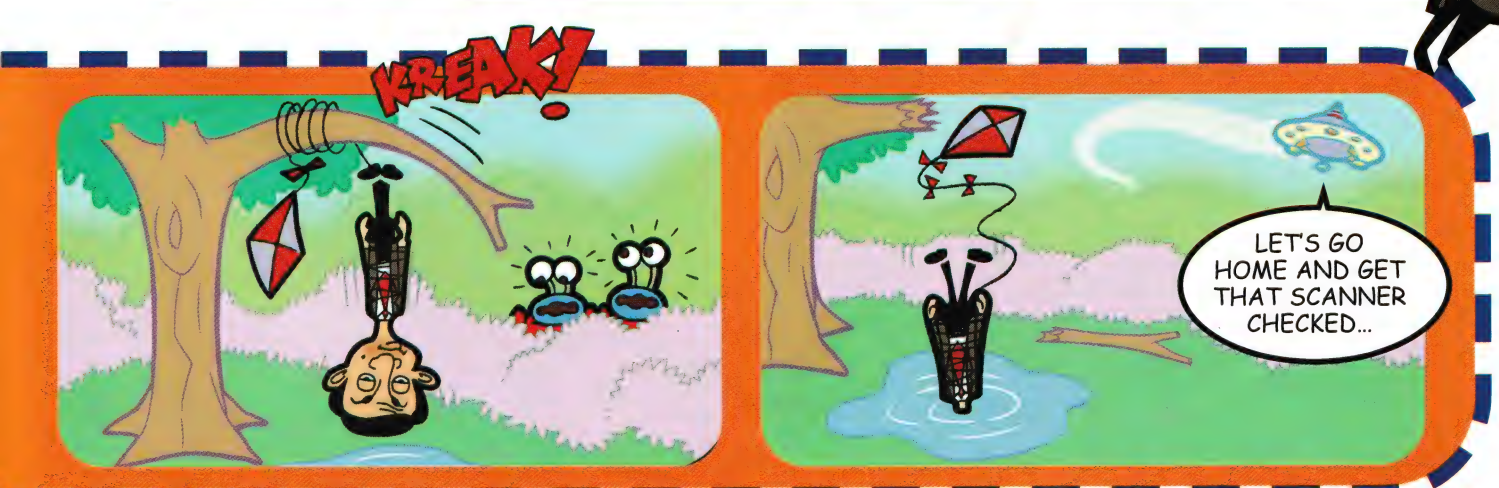
In 1996, a piece of Martian rock was dug out of Antarctic ice. Some scientists believe it contains tiny fossilised bacteria - proof of alien life. But other scientists argue they are too small to have once been alive and could have come from Earth, anyway!

EMPTY SPACE?

Satellite probes whizz around our galaxy loaded with information, so aliens will be able to recognise us if they visit Earth. The Pioneer probe carries pictures of humans and a map of the solar system. But a message sent back from the closest star to our solar system would take eight years to reach Earth!

HO HO! What do you call an alien spaceship that drips water? A crying saucer!

Movie makers think aliens might look like this...



Alligator

These mighty meat-eaters have been on Earth for 200 million years – and they're still hungry!

Over a million alligators roam the Earth. Luckily, they only attack humans if they feel threatened – and a 'gator's jaw can be kept shut with a rubber band! But don't get too close – they can reach 24mph (38km/h)!

HEAD START

EYES Alligators have three eyelids! The extra one is transparent and protects the eye from water.
NOSE Nostrils are on the end of the snout to make breathing in water easier.
EARS A 'gator's ears are behind its eyes, covered by flaps to protect them.
TEETH An alligator has 80 teeth. These drop out and are replaced by new ones. One alligator will get through 2,000 to 3,000 teeth in its lifetime.

FAST FACTS!

TYPE OF CREATURE: Reptile
FOUND: China; USA
LIVES: Freshwater swamps; marshes; river creeks; sometimes they stray into swimming pools!
AGE: 50-75 years
SIZE: Up to 3.3m long and 450kg
EATS: Fish; small mammals; birds; turtles; insects
NEED TO KNOW: You can tell an alligator from a crocodile by its snout. 'Gators have wide, flat heads with a round snout. Crocs' heads are thin

BATCH HATCH

An alligator lays 30-50 eggs in a mound of earth and sits on them for nine weeks. The babies squawk before cracking their shells with special 'egg teeth'. Mum digs them out and carries them to the water. She guards her babies for three years.

Alphabet

HA HA! Which two letters are bad for your teeth? D K!

Alphabets have been spelling it out for around 3,500 years. Not all contain letters – some use symbols instead. Each letter or symbol of an alphabet represents a sound. By putting the letters together you can make words.

- The world has over 50 alphabets.
- Chinese and Japanese languages have no alphabet, but use pictures or pictograms to represent words.
- The Hawaiian alphabet is 12 letters long.
- The Cambodian alphabet has over 70 letters – it's the longest alphabet in the world.

Alps

WOW! In 218 BC, a general called Hannibal led his army and 38 elephants across the Alps to attack the Romans

Grab your skis and head for some of the coolest – and coldest – resorts in the world! The Alps cover 200,000sq km and cross Italy, France, Germany, Switzerland, Austria and Slovenia. They are home to Mont Blanc, the tallest mountain in Western Europe at 4,807m. And the fourth longest railway tunnel in the world, the Simplon Tunnel, stretches 20km under its peaks. That's almost as long as a half marathon!

THE ALPS MUST HEAR REALLY WELL – THEY HAVE SO MANY MOUNTAIN-EARS!

MURDER MYSTERY

In 1991 hikers found a mummified ice-age man in an alpine glacier. Scientists examined his 5,300-year-old body and found he had eaten deer for his last meal. In his back was an arrow made near his home! Was he killed by someone he knew?

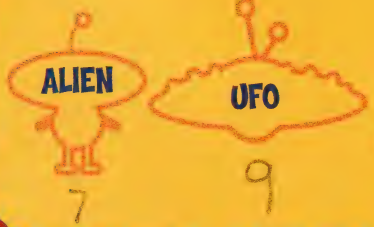
TEE HEE! What did the astronaut say about the eight-legged aliens? "Don't worry, they're 'armless!"

ALIEN INVASION

Ever wanted to see a flying saucer? Well, here's an entire fleet of them! But are there more aliens or UFOs?



Answers on page 23

Amazon

From the river bed to the treetops, the Amazon is full of amaz-ing animals!

The Amazon is a river, a rainforest and a record breaker! The 6,400km-long Amazon River is like a gigantic plug hole, swallowing up the tropical rains of South America. It winds from high in the Andes mountains through the world's largest rainforest to the Atlantic Ocean. Almost as big as Australia, the Amazon rainforest rustles and roars with more species of plants and animals than anywhere else on Earth. Zowee!

WOW!

The Amazon River contains 20% of the world's fresh water

These water lilies on the Amazon River are so big you can float on one and not get wet!

PAGE 36

Many Amazon people believe in the myth that dolphins kidnap women and take them to their underwater land

FOUND BY SOUND!

Amazon river dolphins like to stick their noses in! These pink, pale blue or albino mammals have longer, thinner beaks than sea dolphins. They also have a hump and a ridge on their backs instead of a fin. Like bats, river dolphins use echolocation to hunt. This means they send out high-pitched sounds and listen for echoes to bounce back. The echoes guide them to where their fave fishy grub is hiding.

HA HA! How do dolphins make decisions? They flipper coin!

FISH AND NIPS!

Piranhas swim in the Amazon, so watch your toes! These ferocious fish devour their food alive and tear meat off the bone in seconds. People living by the river use the razor-sharp teeth to make weapons – if they can get close enough!

GRIPPING!

The world's largest snake slithers through the Amazon. An anaconda can weigh up to 250kg – that's the same as 1,800 bananas! It has a gruesome way of killing its prey, squeezing the victim to death! Huge meals, like deer or jaguars, are no problem for these big eaters.

The anaconda simply unhinges its jaw, opens its mouth super-wide and gobbles down the meal whole – head first!

Imagine eating all that in one go... it would take a long time to digest. One captive anaconda didn't eat for two years after a gigantic blow-out!

WOW!

Unlike most snakes, anacondas give birth to live young – up to 40 at one time!

PROUD PEOPLE

Ouch! Women in the Yanomami tribe put bamboo sticks through their noses and cheeks. These piercings are their traditional jewellery. The Yanomami are the largest tribe left in the Amazon. Once there were 2,000 tribes living in this rainforest but now there are only 400.

FAST FACTS!

AMAZON RIVER LENGTH: 6,400km
RAINFOREST AREA: More than 6,000,000sq km
COUNTRIES: Brazil; Bolivia; Peru; Ecuador; Colombia; Venezuela
POPULATION: Over 20 million, with up to 1.5 million tribespeople
RAINFALL: Over 380cm a year
TEMPERATURE: An average of 26°C
NEED TO KNOW: So many animals live in the Amazon that new species are discovered here every year

COOL CATS!

The biggest cat in South America is the jaguar. Jaguars are fierce – they bite into the heads of their victims, from turtles to small alligators. They're clever, too. A jaguar uses its tail like a fishing rod – passing fish nip the tip and the big cat attacks. Yanomami Indians believe the animals scoff dead people's spirits. They call jaguars the 'Eaters of Souls'.

BEAN'S BRAINBUSTER

Is a black jaguar known as a puma, a panther or a blaguar?

Find the answer below!

ANSWER A panther

Amphibian

SAY WHAT? SAY AM-FIB-E-AN

These slippery customers love slime! Amphibians are covered in a layer of it to stop their skin drying out when they're out of water. They are born and can live in water, but amphibians are just as happy on dry land. They are cold-blooded, with moist, hairless skin but no scales. There are three types of amphibians:

- Frogs and toads
- Salamanders and newts
- Limbless, worm-like creatures called caecilia (say se-silly-ah)

More than 4,000 species of amphibian live all around the world, in every continent except Antarctica.

Red alert! Central American tree frogs (below) open their red eyes to scare predators. Their sticky feet grip leaves

Frogs gulp air for super croaks!

WOW!

In March 1998, it rained frogs in Croydon, England! Scientists think the critters had been sucked up by a small tornado!

HA HA! What happened when the frog parked its car on a double yellow line? It got towed away!

Slip over to www.yahooligans.com/content/animals/amphibians

Hans Christian Andersen

1805 - 1875

Born in Denmark nearly 200 years ago, Hans wrote some of the world's favourite fairy tales - over 150 in total! They have been translated into over 80 languages - that's nearly 30 more than the Harry Potter books. One of his most popular tales, **The Little Mermaid**, is a famous animated film (right). Her bronze statue sits on a rock in Copenhagen harbour.

Here are three more of his classic tales:

- **THE UGLY DUCKLING**
  The lonely duckling grows into a beautiful swan.
- **THE SNOW QUEEN**
  A little boy is kidnapped by the Snow Queen, so his best friend Gerda comes to the rescue.
- **THE EMPEROR'S NEW CLOTHES**
  The foolish Emperor thinks only special people can see his clothes - but he's not wearing any at all!

TEE HEE! What is a mermaid? A deep-she fish!

Andes

SAY WHAT? SAY AND-EEZ

Do you like tall stories? The Andes mountain range is 6,700m high - honest! Only the Himalayas are taller. The peaks wind along South America's west coast, spanning seven countries. Many Andean people use llamas (say larm-ers) to help them live. The woolly wonders (right) carry heavy loads, provide wool for clothes and fresh milk to drink.

RECORD BREAKERS!

THE ANDES CONTAIN THE WORLD'S...

LONGEST MOUNTAIN RANGE: The Andes stretch over 8,000km from Venezuela in the north to Argentina in the south

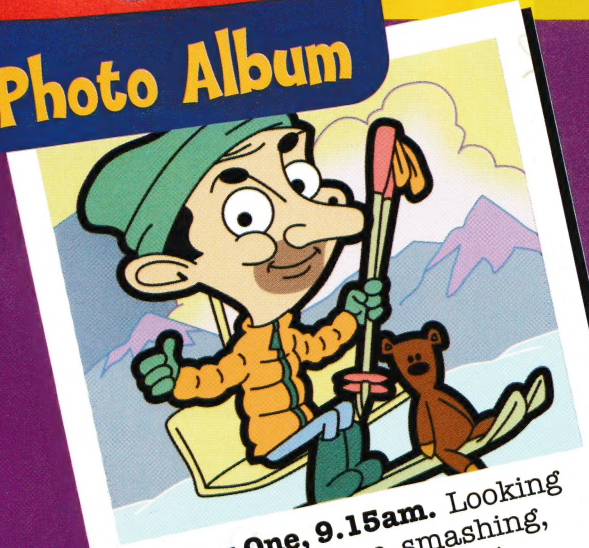
HIGHEST SAILABLE LAKE: Lake Titicaca is 3,800m above sea level

HIGHEST CAPITAL CITY: La Paz in Bolivia is 3,600m high in the Andes

HEAVIEST BIRD OF PREY: Andean condors weigh in at up to 12kg

mr Bean's Photo Album

My Andes skiing holiday



Day One, 9.15am. Looking forward to a smashing, tremendous trip!

Day One, 3.15pm. Wasn't looking forward – tripped and smashed into a tree...

Android

Imagine a super-intelligent chum who looks spookily human but instead of skin and bone, is made from metal and microchips! This is an android. And it could do whatever you programme it to... even finish off your Maths homework!

- K-bot (right) can make 28 different expressions. Built by a scientist in Texas, USA, K-bot grins and frowns using mini-motors hidden underneath her plastic skin.
- Another American android, Kismet, can answer you and even learn from its mistakes.
- While you're watching the next footie World Cup, clever boffins will cheer on their teams at the RoboCup. Human-sized robots built around plastic skeletons play in a humanoid league!

MACHINES ON SCREEN

C-3PO The fussy droid from Star Wars is a real clever-clogs

DATA Star Trek's officer dreams using an emotion chip

Anglerfish

Ever seen a fish that likes to, er, fish? An anglerfish has an extra spine sticking out of its head, just like a fishing rod. Some spines have ends that look like wriggly worms; others glow in the dark! Anglerfish use them as bait. They hide in weed and coral, then jiggle their bait around just above their mouths to attract passing fish. The prey mistake the bait for tasty grub and when they grab it, the anglerfish makes its deadly move. Gulp!

WOW!

Anglerfish don't always swim. They can use their fins to crawl across the ocean floor
